

# IQVIA One Home for Sites

*Bringing clinical technologies under one roof*

IQVIA One Home for Sites is a platform that serves as a **neutral aggregator, connector, and communicator** of the key systems and tasks a clinical research site needs to perform across all the trials it is conducting. It is the only product designed to reverse the negative effects of technology proliferation that is plaguing sites today.

## Clinical trials need innovation

Spending on clinical technology products and services has grown by more than 80% since the year 2010, yet study timelines continue to increase.

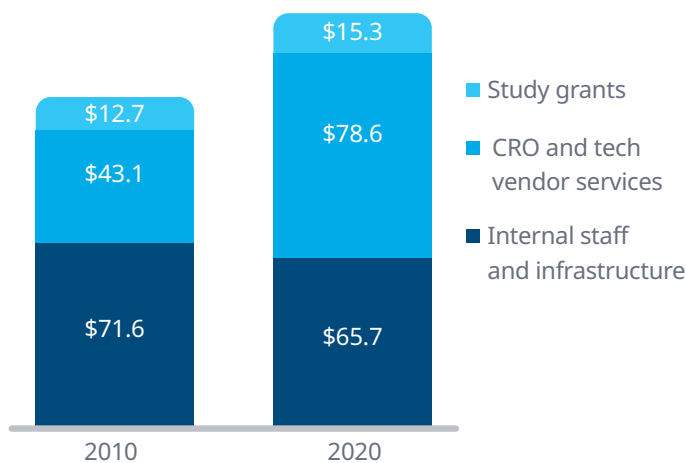

Now, site staff attrition and trial complexity are limiting site capacity to crisis levels. According to Bain & Company, 56% of sites say trials are more complex than 3 years ago, with a 100% increase in those sites citing next-gen tools and third-party vendors as the source of that complexity. Sites are being forced to make tough trade-offs and turn down trials.

The result: Sponsors are having difficulty finding enough sites and patients to run their studies. Budgets and timelines are increasing, reducing profitability and ROI.

**26%** of site staff reported declining more trials due to capacity challenges

# Introducing IQVIA One Home for Sites

IQVIA Technologies is stepping up to the challenge of building a single home for sites into which all industry stakeholders are welcomed. Sponsors, CROs, and tech

vendors now have a place to bring their site-facing applications together, under one roof, in One Home for Sites.

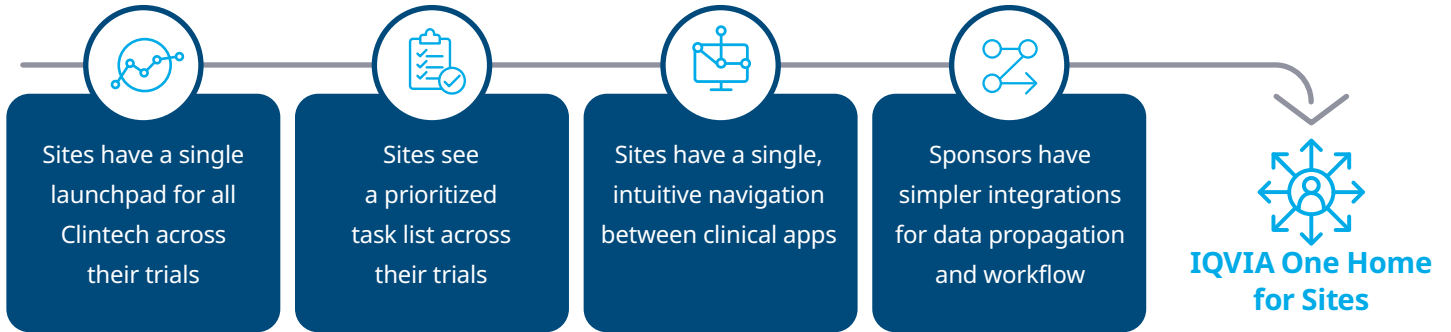

Figure 3: Key features of IQVIA One Home for Sites

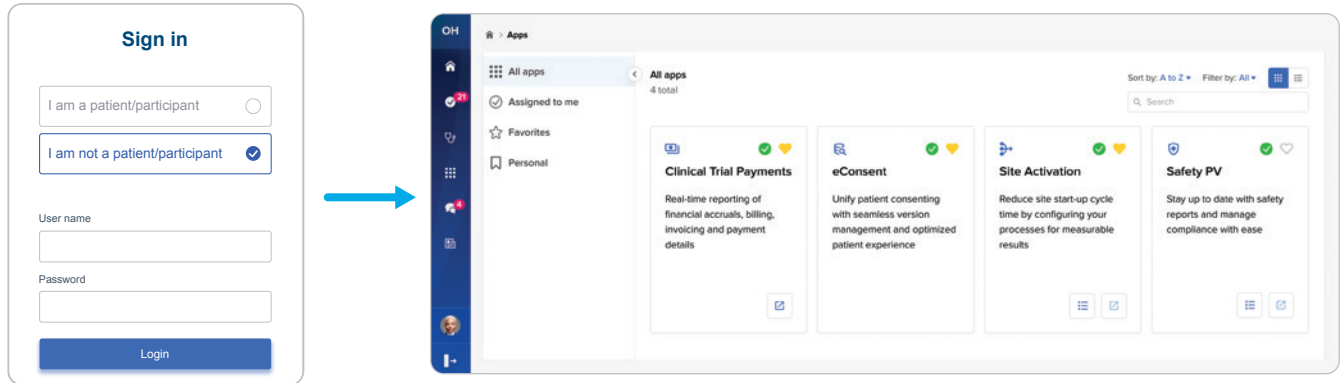

## Aggregation and communication across systems and studies

The composite image features three circular icons on a teal background above a laptop. The icons are: 1. A person with a lightbulb (Single sign on). 2. A computer monitor with a magnifying glass (Task management). 3. Two speech bubbles (Site engagement and chat). Below the icons is a laptop displaying the IQVIA One Home for Sites dashboard. The dashboard includes a sidebar with navigation options (Dashboard, Tasks, Studies, Apps, Messages, News), a main header with a welcome message for "Dr. Queen" and a task count of 21, a progress indicator for "47% Completed tasks", a "Recent task items" section with three overdue tasks (Pay Invoice for Start-up Cost, Budget to review, CV to review), a "Recent studies" table, and a "Favorited apps" section.

Study name	Protocol #	Tasks
Constellation PharmaCast	CRT18899	10
Captivate BioPharmaCo	NPC18892	2
Constellation PharmaCast	QVC16833	4

## Let's Fix the Site Plight. Together.

### **Built for sites to benefit all**

When pharmaceutical sponsors of trials adopt IQVIA One Home for Sites, they reduce the burden on their clinical research sites and on their own organizations. Most importantly, they are contributing to the overarching mission of the industry: To increase clinical trial capacity so that new treatments get to patients in need more quickly.

#### **SPONSORS**

- Deliver on a better investigator experience
- Get your studies prioritized and started faster by sites
- Keep your current clinical tech stack – no need to commit to a single vendor or develop inhouse

#### **SITES**

- Spend less time logging into systems and more time with patients
- Simplify system management and onboarding new staff and trials
- Activate more quickly

#### **TECH PARTNERS**

- Become a preferred vendor to more sponsors and sites
- Make integrations easier for your developers and customers
- Gain exposure in the clinical marketplace and grow your userbase faster

# Become part of the movement to increase clinical trial capacity

**Because patients can't wait**
