

Digital Trial Management Suite

Achieve business outcomes more effectively with increased monitoring efficiency, improved patient safety, and embedded compliance

Transform your clinical research with IQVIA Technologies Digital Trial Management Suite (DTMS). Built on the Salesforce Health Cloud®, this suite of configurable SaaS-based products help you mitigate risk and improve the productivity and quality of clinical trials. Interoperable, Intuitive and Intelligent, these products work well on their own but are even more powerful together, improving patient safety, reducing trial risk, cost, and speeding time to market.

THE CHALLENGES

As the urgency builds to conduct offsite and hybrid trials, a myriad challenges arises, including disparate data across siloed systems and platforms that don't allow for best-in-breed or a-la-carte tech strategies. Additionally, cumbersome UI and disconnected point solutions add complexity to workflows and make it nearly impossible to get real-time actionable insights.

THE SOLUTION

IQVIA Technologies DTMS is a suite of cloud-based and configurable monitoring applications that are born integrated and powered by the Salesforce Health Cloud®. The products include:

- Clinical Trial Management System (CTMS) – Facilitates decentralized trials
- Risk-Based Monitoring (RBM) – Allows compliant, off-site monitoring
- CRA Central – Provides guided workflows and smooth data integration for CRAs

Each application is designed to:

- Enable decentralized and hybrid trials, achieve monitoring efficiency
- Improve patient safety and compliance
- Provide AI/ML analytics powered by unified clinical data

THE BENEFITS

DTMS products integrate seamlessly with your EDC, eTMF and other clinical systems via our Clinical Data Analytics Suite, a data and analytics engine that provides a single source of truth for all study-related data. Workflows are simplified across the suite through the use of the IQVIA Technologies Apollo intuitive user interface. By incorporating the use of AI and ML, these products can suggest intelligent, next best actions based on personas for better trial outcomes.

DTMS also helps by:

- Increasing the efficiency and quality of clinical trial monitoring
- Reducing trial risk and ease administrative burden
- Providing guided workflows based on industry best practices

Discover how IQVIA Technologies Digital Trial Management Suite helps sponsors increase trial efficiency and quality while improving patient safety and compliance for more intuitive, efficient trials.
