

IQVIA Research Nursing and Phlebotomy Solutions

High-quality, credentialed remote clinicians providing compassionate protocol-required care to patients in their homes

The human touch of tech-enabled trials

Sites and trial participants have become familiar with decentralized study elements that alleviate the burden, expand the recruiting radius where regulations permit, and offer participants engagement opportunities on their terms. However, there are still times when visits require a human touch, when trained professionals are utilized to perform specific research activities in a home environment.

IQVIA Research Nursing and Phlebotomy Solutions (RNPS) provide mobile research clinicians across the globe. Our professionals aid in engaging patients where they live to deliver protocol-required in-home research services. These services elevate the quality of the study and meet the needs of the trial. The IQVIA RNPS team offers a global network of remote research clinicians

trained to carry out protocol-specific tasks within their country's regulatory system benefiting sponsors, sites, and patients. Available as a stand-alone service or as part of a broader solution.

Patient-centered Care in Practice

Enhance patient engagement

IQVIA RNPS offers patients flexibility to choose at-home study visits which makes clinical trial participation more attractive and strengthens engagement.

Drive efficiency and quality

IQVIA's mobile study teams are equipped with training and quality oversight to ensure each visit counts, driving efficiency from first patient in to last patient out.

Deliver adaptability, globally

Mobility brings its own logistical hurdles. Mobile study teams like IQVIA's RNPS help expand the radius of the clinical site while also adhering to strict privacy rules and compliance regulations.

What RNPS supports

The IQVIA RNPS project manager operationalizes home visits, freeing site staff for more study needs. Qualified registered nurses are trained on study requirements, assessments, and protocols. Principal investigators and site staff receive the nurse's credentials before the first visit and can meet with the nurse if desired. Source documentation is available for site review within 24-48 hours after each visit and RNPS completes a review for GCP prior to

finalization. Remote nurses handle less complex visits, reducing site burden and freeing up site staff time for more complex tasks. Patients appreciate optional in-home services, citing reduced wait times, shorter drive times, and increased comfort, leading to higher patient participation, reduced dropout rates, and improved patient diversity.

RNPS supports direct-to-patient delivery and administration of investigational products, along with data and specimen collection.
