

2025 Overview (as of October 2025)

# IQVIA Health Data Catalog - Patient data

The go-to global source to rapidly identify the most relevant Real World Data sources

## Welcome to the IHDC Infographics!

IHDC makes assessing real world data fast and easy with continuously updated **4,400+ patient datasets profiles** across 100+ countries described by up to **250+ core variables**, further enriched - for some - with **disease area specific descriptors**.

IHDC is accessible upon subscription, either:

- in SaaS Syndicated mode (IQVIA interface & IQVIA content), or
- in SaaS proprietary mode (IQVIA interface + IQVIA content + client confidential content)

## The IQVIA Health data catalog evolution in 2025

Via the proactive management of the community of data sets owners and experts — in and outside of IQVIA — IHDC is undergoing dynamic evolution resulting in the following main changes in 2025

The # of referenced data sets has increased by 235+ since beginning of 2025, reaching 4,400+

The # of datasets referenced in Europe has showed the highest increase (120+ additional assets)

The # of listed sources also increased in Asia (80+ new assets) and Northern America (40+ new assets)

Although most of the data sources referenced in IHDC are disease specific, the number of "general datasets" is continuously increasing (80+ new datasets since beginning of the year)

Oncology is the most frequent therapeutic area covered (1,110+ oncology specific datasets)

The number of "genitourinary disease datasets" and of "infectious disease datasets" show the highest increases with respectively more than 50 and more than 40 new references added since Jan 25

The **fill-in rate** on the landing page of the catalog is set as an indicator providing transparency and managing expectations on the available level of information on listed datasets. The % represents the number of fields documented out of expected number to be documented

A PAR

Ongoing orchestrated efforts of **185+ teams** of data holders and SMEs (including external data owners who now can edit their own datasets profiles) resulted in an **increased depth of dataset profiling**: in addition to the 235+ datasets added since January 2025, 85+ profiles have seen their fill-in rate increased by 7 points on average (with a maximum value of 80+ points)

These efforts to deepen IHDC content translate into a continuous increase in the number of datasets showcasing a significant level of depth (fill-in rate >25%, corresponding to more than 35 variables documented)

The efforts to enrich the content of the catalog are facilitated by some developments – transparent for the users – significantly contributing to an improved quality of the content. The "import program" for example, already facilitating the harmonization of IHDC information across data assets coming from different sources, is regularly improved to facilitate and harmonize updates

# IQVIA Health data catalog: What's next?

After an extremely rich year 2024, 2025 is already another year of progress for IHDC, in terms of content breadth and depth as well as in terms of enhanced user experience. Stay tuned!

### Content breadth and depth

- Scope enlargement to include other types of health datasets:
  - The Health Care Professionals (HCPs) datasets module will be released in Q4
  - Modules for other types of health datasets will come next
- The network of data partners directly contributing to IHDC is growing
- Catalog precision level improvement:
  - Deeper classification of datasets by disease area
  - New disease area deep dives are made available regularly (IFI, ALD, and more yet to come)
  - 5 disease area deep dives out of the 20+ already available, have been updated

#### User experience improvement

- In 2025 the focus is on leveraging AI to improve search features:
  - The AI assistant making it easy to leverage most relevant search filters is now enabled.
    It helps users choose the right search filters, and can also share definitions of fields in search categories or tips on optimizing searches
- Other 2025 developments aim at streamlined experience and improved content:
  - Revised / reorganized structure of information to facilitate the navigation
  - Facilitated management by admins and contributors (maintainers)
