

The Cost of 340B to Texas

In 2025, workers and employers lost \$745 million in negotiated rebates to 340B

Despite advocates' claims that the 340B program is free, it raises costs for patients, employers, state and local governments, Medicare, and managed Medicaid. One way it increases costs is by displacing the negotiated rebates that are used to lower net drug prices. Research by IQVIA shows that workers and employers lost \$14.5 billion in rebates nationally in 2025 due to 340B.¹ The cost to Texas workers and employers in 2025 was \$745 million.

340B also displaces rebates in managed Medicaid, which cost the state of Texas \$68M in 2025.

The cost of 340B to Texas has increased substantially in recent years due to program growth. From 2023 to 2025, the number of healthcare providers prescribing 340B drugs, the number of 340B facilities, and the value of 340B drug purchases all increased.

Texas has lower 340B utilization than neighboring states, leaving substantial headroom for growth as large hospital systems and contract pharmacy networks continue to expand their footprint in the state.
