Healthcare leaders in the U.S.

IQVIA's OneKey database contains accurate information about provider roles, organization types, and address indicators

Healthcare providers (HCPs) often practice at more than one site. Doctors will take appointments at the home office of their group, and also provide care at locations in other cities including clinics or surgery centers. IQVIA has identified all the locations at which a provider may see patients or perform treatments. Each business day, 35 million individual professional addresses are evaluated, processed, and ranked using IQVIA's proprietary Address Intelligence methodology, enabling us to uniquely indicate a professional's best address. Using the Best Address, you operate more efficiently relative to your commercial objectives. Reasons to employ Best Address include sales representative planning and engagement, physician targeting and segmentation, non-personal promotion programs like direct mail, market research studies, and more. The following charts rank professionals and organizations using our compiled address attributes. All Addresses Per Provider is inclusive of all addresses for the professionals that are ranked in Address Intelligence as preferred and active. This information and other profile characteristics are available in IQVIA's OneKey, a comprehensive reference database for the healthcare industry.

All addresses per provider

Provider	Count
Basic nurse	2,827,585
Medical doctors	2,724,962
Pharmacist	1,078,437
Healthcare administrator	678,849
Advanced nurse	604,399
Dentist	410,028

"Drive better performance of your most important commercial initiatives with intelligent address data."

1.1M
UNIQUE, ACTIVE, AND SEMI-RETIRED MEDICAL DOCTORS
